

## Bus Information Totem

## Bus Information Totem

Trueform has been working with LBSL's Technical Services Group on the development of its corporate TFT totem product range, and has now completed the first installation at Vauxhall Bus Station.

The totem installed at Vauxhall is a 42" portrait, sunlight readable, high brightness TFT product with 3G communications. LBSL's newly developed Digital Sign bus information content was installed, driven by Countdown 2 – an earlier project where Trueform has supplied, installed and maintains over 1,400 LED bus shelter displays.

The Vauxhall installation will soon be followed by further deployments at Hammersmith and Harrow Bus Stations.
